

**Workshop:**

**Industry-research collaboration to develop  
next generation cold supply chains**

**3<sup>rd</sup> July 2016, 3pm-6pm**

Challenges identified for the next five to ten years:

1. Cost of ascertaining quality in end to end supply chain
2. Lack of transparency in maintaining the quality from production to distribution
3. Lack of awareness by consumer on packaging and labeling
4. Skill and talent development for human resource
5. Regulations and implementation
6. Last mile challenges for delivering the temperature controlled products
7. Ethics in cold chain operations
8. Sustainability of cold chain solutions for performance solutions
9. Matching infrastructural capacity and production in cold chains
10. Low cost technology solutions and their geographical contextualization
11. Sustainable energy sources for cold chains
12. Minimisation of food wastage and recycling
